

Let your lips do the talking

A product promising a more youthful appearance, without the giveaway signs of surgery is available in Suffolk.

The Suffolk Medical Clinic has been using the Hydra Fill range of products for 3 years. There is now an addition to the range called **Hydra Fill Softline**. This is a new generation of synthetically made hyaluronic acid (a naturally occurring substance in the skin), which is used to restore a youthful looking skin which, due to age, sun damage, weight loss and stress can lose its structure.

Common areas targeted by these fillers are forehead wrinkles, lips, lines from the nose to the mouth and the chin area.

The fillers are injected under the skin with tiny needles and promise only mild discomfort. The highly publicised bad reactions to some treatments scare many prospective clients and co-owner Jenny Goard, has to reassure many that those reactions are very rare.

"When patients come in and ask for more plumped or better defined lips they nearly always say 'please don't make me look like Lesley Ash'," says Jenny. Since the drama, now two years ago Ash, commonly now known as 'trout pout' has admitted to plumping up her top lip. Like many, she wanted a natural look which reversed the signs of ageing and, after her bad reaction, she tried corrective surgery to no avail.

But this, luckily, is rare and most people enjoy a natural and more youthful look after treatments such as Collagen, Radiesse and Hydra Fill.

Jenny is a registered general nurse and happy with the results of Hydra Fill and says her clients are too. "We have been using the Hydra Fill range of products with no problems for years now. With the advent of a longer lasting filler in Hydra Fill Softline, clients are delighted that they can have the same safe and natural product lasting up to one year".

Hydra Fill is a non-animal derived, transparent gel and works by replenishing the hyaluronic acid found naturally in the skin. For more information on Hydra Fill and the rest of the range of anti-ageing solutions call the Suffolk Medical Clinic on 01787 211000.
