

A Pain free way to reduce the signs of ageing

STRESS, TIREDNESS AND THE DAILY GRIME OF HECTIC CITY LIVING – WHAT WOULDN'T WE GIVE TO BE ABLE TO MASK THE EFFECTS ON OUR SKIN?

Most of us would welcome a little help in retaining our youthful looks, and with such huge advances in the beauty industry it is now possible for image-conscious women (and men) to delay the signs of ageing without opting for full-blown cosmetic surgery.

Dermal fillers have long been used to restore volume to the face and eliminate wrinkles. Now, a Suffolk-based practice is one of the first clinics in the UK to offer a revolutionary treatment which promises natural-looking results with the least amount of discomfort.

The Suffolk Medical Clinic was one of only 10 clinics in the UK to be included in the clinical trials for Juvéderm® ULTRA.

The Juvéderm® ULTRA range of products are an advanced formulation of hyaluronic acid dermal fillers for longer-lasting correction of moderate to severe facial wrinkles and folds. Hyaluronic acid is a naturally occurring component of the skin which normally

provides elasticity and resilience. The ability of our cells to produce hyaluronic acid diminishes with age.

Juvéderm® ULTRA is unique as it is the only hyaluronic acid dermal filler currently on the market that contains the anaesthetic lidocaine. This provides a gentle, pain-free injection experience that allows the client to achieve a smooth, natural look and feel.

Dr Anthony O'Neill, joint owner of the Suffolk Medical Clinic and a qualified doctor says: "Juvéderm® ULTRA has anaesthetic within the filler itself so it numbs the area as you inject and is virtually pain free."

The filler can be used on many areas of the face but is typically used to treat the lines running from the nose to the corners of the mouth, frown lines, crow's feet and smoker's lines. Lips can also be enhanced or evened out.

It has been tested by over 60 clinics across Europe, with over 90 per cent of patients and practitioners rating the results and satisfaction levels as excellent or good. It is the only hyaluronic acid filler on the market to be approved by America's Food and Drug Administration as lasting up to one year. Other fillers will only last for six to nine months.

Suffolk Medical Clinic offers clients the option of combining dermal fillers with Botox® injections. This combination approach enables both static and dynamic lines to be treated in tandem, helping to provide a more even and balanced effect.

Suffolk Medical Clinic is Healthcare Commission registered and approved and is run by Dr Anthony O'Neill MB., BS. and Registered General Nurse Jenny O'Neill.

If you would like more information on the clinic and its full range of treatments please call 01787 211000 or visit www.suffolkmedicalclinic.co.uk Suffolk Medical Clinic, 6 Broad Street, Boxford, Sudbury CO10 5DX
